WhatsCRM — Changelog Report

Branch: main · Prepared: 05 Oct 2026 · DevCorescent / shallo3017

Summary

Total commits reviewed	7
Files changed (latest)	134
Lines added (latest)	+4,161
Lines removed (latest)	-955
New features / APIs	6
Enhancements	5
Bug fixes	5
Test files added	2 (contacts-control, view-as)

Commit Log

9c96d9f	feat: contact control, segments on contacts, reseller reports, super admin view-as, admin WhatsApp panel, mobile-responsive app	134	+4161	-955
d6fddd8	feat: skip email verification — register creates verified account and auto sign-in	3	+14	-38
6cfd397	fix: use NEXT_PUBLIC_APP_URL for verify link on localhost	2	+12	-6
f3de84b	fix: re-index endpoint + button for knowledge-base docs missing businessId in Qdrant	2	+105	-8
18fbf19	fix: register validations, disposable email block, FB button fix, console logs	4	+180	-12
1deecce	fix: template form validations — language mismatch, missing media, all errors in submit	1	+55	-8
3680048	feat: email verification, onboarding wizard, WA health, click tracking, reseller SMTP	22	+1200	-95

Feature Breakdown — Latest Commit (9c96d9f)

Each row is one discrete change. Type: **NEW** = new capability, **UPD** = enhancement, **FIX** = bug fix.

Contact Control	NEW	Bulk-select contacts; tag / untag in bulk; block / unblock / archive / delete in one action; optimistic UI with undo toast	contacts/page.tsx api/contacts/bulk/route.ts lib/contactActions.ts hooks/useContacts.ts	422 + 177 + 63 + 54	—
Contact Tags API	NEW	GET /api/contacts/tags — lists all distinct tags used across the tenant's contacts. Powers the tag filter on the contacts page.	api/contacts/tags/route.ts api/contacts/sources/route.ts	33 + 3	—
Reseller Client Report	NEW	Per-client PDF-ready report for resellers: conversation volume, messages sent/received, campaign stats, lead funnel, top templates.	components/reseller/ClientReport.tsx lib/clientReport.ts api/reseller/clients/[id]/report/route.ts	128 + 137 + 40	—
Super-Admin View-As	NEW	Super admin can impersonate any tenant to debug issues without knowing their password. Session stores viewAsTenantId; all API calls honour it transparently.	components/admin/ViewAsButton.tsx lib/viewAs.ts api/admin/view-as/route.ts types/next-auth.d.ts	51 + 79 + 106 + 5	—
Admin WhatsApp Panel	NEW	Super admin can view & manage a tenant's WhatsApp integration: see connected numbers, health status, reset / force-reconnect.	components/admin/TenantWhatsAppPanel.tsx api/admin/tenants/[id]/whatsapp/route.ts	227 + 222	—
Admin Contacts Panel	NEW	Super admin can browse a tenant's contacts without logging in as them. Read-only view with search and pagination.	components/admin/TenantContactsPanel.tsx api/admin/tenants/[id]/contacts/route.ts	297 + 126	—
Segments on Contacts	UPD	Segment filter chip on the contacts list. Applying a segment filters contacts to only those who match its rule-set in real time.	contacts/page.tsx segments/page.tsx	+40 (segments)	—

Mobile-Responsive App	UPD	h-screen -> h-dvh (iOS Safari fix). Sidebar CSS slide transition. flex-wrap on all PageHeader action bars. Leads defaults to list view on mobile. ContactPanel visible at lg not xl. Notification dropdown max-w guard.	layout.tsx, inbox/page.tsx Sidebar.tsx, Topbar.tsx campaigns, contacts, leads, templates	~50	~20
Campaigns Enhancements	UPD	Exclude specific contacts before send. Per-recipient exclusion UI in campaign modal. Enhanced campaign list with segment name.	campaigns/page.tsx api/campaigns/route.ts workers/campaign-send/route.ts	211 + 27 + 9	~60
Template Variables	UPD	Variable substitution now handles nested paths (contact.company, lead.title). Fallback chain: contact field -> custom attrs.	lib/campaigns/templateVars.ts lib/templates.ts	65 + 64	~10
Admin Tenant Detail	UPD	Refactored tenant detail page: tabs for Contacts, WhatsApp, Wallet. View-As button placed in the header action bar.	tenants/[id]/page.tsx tenants/page.tsx	104 + 287	~150
Email Verification OFF	FIX	Registration now creates emailVerified:true. No email sent, no token generated. Auto sign-in + redirect to /inbox on success.	api/auth/register/route.ts lib/auth.ts register/page.tsx	14	38
Verify Link URL	FIX	Localhost registrations use NEXT_PUBLIC_APP_URL in the verify link so Gmail doesn't spam-bin emails with localhost:3000 links.	api/auth/register/route.ts api/auth/verify-email/route.ts	12	6
Knowledge Base Re-index	FIX	Docs indexed before businessId scoping lack businessId in Qdrant payload — AI returns no results. Re-index button resets + re-queues the doc so Qdrant gets the correct payload.	api/knowledge/[id]/reindex/route.ts knowledge-base/page.tsx	105	8

Register Validations	FIX	Invalid invite code -> 400 before account created. Disposable email domains blocked server-side (50+ domains). Facebook connect button now visible when no business exists.	api/auth/register/route.ts WhatsAppConnectCard.tsx	180	12
Template Validations	FIX	Hindi/Arabic selected but Latin typed -> amber warning + blocks save. IMAGE/VIDEO/ DOCUMENT header type with no upload -> rose error + blocks save.	templates/page.tsx	55	8
